Course Description:
Electrical Aspects of Fire Investigation and Lithium-Ion Battery Fires
 The electrical aspects of fire investigation course is designed for investigators to achieve an understanding of electrical concepts and their application to fire investigation. The course topics of discussion include ATF Fire Research Lab Capabilities and Resources, Electrical Safety, Electrical System and Component Identification, Electrical Failure Analysis, and Case Studies. Lithium-ion batteries are prevalent in the modern fire environment and come in a variety of forms. This portion of the course will cover battery basics, failure modes, and case studies that include considerations for operational tactics, fire investigations and personnel health and safety.
